

IMPORT DATA USING TRANSFORM MAPS (SPREADSHEET)

1. PROJECT TITLE

Import Data using Transform Maps (Spreadsheet)

The project is developed as a ServiceNow micro project for importing structured employee data from an external spreadsheet into the ServiceNow platform. The process uses an Import Set table as a staging area and a Transform Map to transfer source data into a custom target table.

The project demonstrates spreadsheet preparation, custom table creation, Import Set creation, field mapping, transformation, validation, duplicate-handling through Coalesce, report creation, and dashboard configuration.

2. PROJECT OVERVIEW

The project simulates a real-world situation in which employee information is received in Excel format and must be migrated into ServiceNow efficiently and accurately. The spreadsheet data is first loaded into an Import Set table, where it can be treated as staging data. A Transform Map then maps the source fields to the appropriate fields in the Employee Test target table.

The original project identifies the following main components:

- Source spreadsheet / Excel employee data.
- Employee Import staging table (u_employee_import).
- Employee Test target table (u_employee_test).
- Sample Spreadsheet Import Transform Map.
- Coalesce for repeated imports and duplicate handling.
- Employees by Department, Employees by Location, and Employee List reports.
- Employee Analytics Dashboards dashboard.

The overall workflow is designed as an end-to-end data import process: source preparation → staging → field mapping → transformation → validation → reporting → dashboard.

3. PROBLEM STATEMENT

Employee information received in spreadsheet format may contain many records and may need to be imported more than once. Manual entry of every record is time-consuming and can make validation and repeated updates difficult. A controlled import process is therefore required.

The project addresses the need to load spreadsheet information into ServiceNow while maintaining a clear separation between source data and the final target records. The staging Import Set provides an intermediate location, while the Transform Map provides the rules for moving the information to the target table.

Repeated imports also create a need for matching existing employee records. The project therefore extends the basic import process with Coalesce so that existing Employee IDs can be recognized during later imports. The documented testing demonstrates both inserted and updated records and a subsequent repeated upload in which rows are ignored.

4. USER STORY

As a ServiceNow user or administrator, I want to import employee data from a spreadsheet into a custom ServiceNow table, map the source fields correctly, validate the transformed records, handle repeated imports without unnecessary duplicate records, and view the resulting information through reports and a dashboard.

The user should be able to prepare employee spreadsheet data, load it through the Import Set, configure the Transform Map, run the transformation, inspect Employee Test, perform a repeated-import test, review Transform History, and view the resulting reports and dashboard.

5. OBJECTIVES

5.1 Spreadsheet Data Import

To import structured employee information from an external spreadsheet into ServiceNow using the Import Set process.

5.2 Custom Target Table

To create Employee Test as the target table with the required employee fields.

5.3 Field Mapping

To map source fields to target fields through the Sample Spreadsheet Import Transform Map using Auto Map Matching Fields and Mapping Assist.

5.4 Transformation and Validation

To execute the transformation and verify that the resulting records are created correctly in Employee Test.

5.5 Coalesce Testing

To use Coalesce so that an existing Employee ID can be matched during repeated imports and existing information can be updated rather than duplicated.

5.6 Reporting

To create department, location, and employee-list reports from the imported Employee Test records.

5.7 Dashboard

To consolidate the three reports into the Employee Analytics Dashboards dashboard.

6. REQUIREMENTS

6.1 Functional Requirements

- FR-01 — The project must accept employee information from a spreadsheet.
- FR-02 — A custom Employee Test target table must be available.
- FR-03 — Employee ID, Employee Name, Email, Department, and Location must be configured as target fields.
- FR-04 — An Employee Import Import Set table must receive the spreadsheet data.
- FR-05 — A Sample Spreadsheet Import Transform Map must connect the source and target tables.
- FR-06 — Source and target fields must be mapped and the transformation must be executable.
- FR-07 — The Employee Test table and Transform History must be checked after transformation.
- FR-08 — Coalesce must be tested for existing and new employee IDs.
- FR-09 — Three reports must be created from Employee Test.
- FR-10 — The three reports must be added to Employee Analytics Dashboards.

6.2 Non-Functional Requirements

- The import process should be consistent and easy to validate.
- Source-to-target mappings should remain clear and traceable.
- Repeated imports should be testable through Transform History.
- Reports should present imported data in a readable form.
- The dashboard should provide a centralized view of the project results.

6.3 ServiceNow Requirements

- A ServiceNow instance with access to the required table, Import Set, Transform Map, Reports, and Dashboard functionality.
- Permission to create the documented custom table and import configuration.
- A spreadsheet containing structured employee records.

7. SYSTEM DESIGN

7.1 Overall Design

Spreadsheet → Employee Import → Sample Spreadsheet Import → Employee Test → Validation → Reports → Employee Analytics Dashboards

The spreadsheet is the external source. Employee Import acts as the staging layer. The Transform Map contains the source-to-target mapping. Employee Test stores the transformed records. Validation is performed by checking the target table and Transform History. Reports and the dashboard provide the presentation layer.

7.2 Target Table Design

Field	Type
Employee ID	String
Employee Name	String
Email	String
Department	String
Location	String

7.3 Import Set Design

Label: Employee Import. Name: u_employee_import. The table receives the spreadsheet data before the transformation.

7.4 Transform Map Design

Name: Sample Spreadsheet Import. Source Table: Employee Import. Target Table: Employee Test. Auto Map Matching Fields and Mapping Assist are used for mapping.

8. PHASE 1 – BRAINSTORMING & IDEATION

The first phase defines the idea and establishes the purpose of the micro project. The selected concept is to import employee spreadsheet data into ServiceNow through Import Sets and Transform Maps.

8.1 Purpose

The purpose is to demonstrate a practical ServiceNow data-import workflow in which structured employee data is loaded from an external spreadsheet, mapped to a target table, transformed, and validated.

8.2 Project Focus

- Prepare structured employee data in spreadsheet format.
- Use Employee Import as the staging area.
- Map source fields to Employee Test.
- Execute and verify the transformation.
- Apply Coalesce to repeated employee data.
- Present the resulting data through reports and a dashboard.

8.3 Expected Value

The project provides practical understanding of the complete import process, field mapping, transformation, validation, duplicate handling, reporting, and dashboard presentation.

9. PHASE 2 – REQUIREMENT ANALYSIS

The requirement phase identifies the structures and activities needed for successful implementation. The target table, staging table, Transform Map, validation activities, reports, and dashboard are defined before development.

9.1 Data Configuration

Target: Employee Test (u_employee_test). Import Set: Employee Import (u_employee_import). Transform Map: Sample Spreadsheet Import. Target fields: Employee ID, Employee Name, Email, Department, and Location.

9.2 Validation Requirements

The project requires verification of successful transformation, inspection of Employee Test, and review of Transform History for inserted, updated, and ignored records.

9.3 Reporting Requirements

The project requires Employees by Department, Employees by Location, and Employee List Report, followed by the Employee Analytics Dashboards dashboard.

10. PHASE 3 – PROJECT DESIGN

The design phase converts the requirements into a clear ServiceNow structure. The main design separates source data, staging data, transformation logic, target records, validation, and presentation.

10.1 Design Flow

Spreadsheet → Employee Import → Transform Map → Employee Test → Validation → Reports → Dashboard.

10.2 Design Principles

- Use a staging table before writing to the final target.
- Keep source and target fields explicitly mapped.
- Use Employee ID as the matching field for Coalesce testing.
- Use Transform History to observe import outcomes.
- Use reports and dashboards to present the final data.

11. PHASE 4 – PROJECT PLANNING

The implementation is planned as a sequence of dependent tasks. The spreadsheet is prepared first, followed by the target table, Import Set, Transform Map, field mapping, transformation, Coalesce testing, reporting, and dashboard

creation.

11.1 Implementation Sequence

- Prepare the spreadsheet and download it as Sample Spreadsheet.xlsx.
- Create Employee Test and its required fields.
- Create Employee Import through Load Data.
- Create Sample Spreadsheet Import.
- Map source and target fields.
- Run the transform and validate Employee Test.
- Enable Coalesce and perform repeated-import testing.
- Create the three employee reports.
- Create Employee Analytics Dashboards and add the reports.

11.2 Test Planning

Testing includes the initial successful import, a modified spreadsheet containing existing and new Employee IDs, and a repeated upload of the same sheet to observe inserted, updated, and ignored results.

12. PHASE 5 – PROJECT DEVELOPMENT

12.1 Spreadsheet Preparation

Open a new Google Spreadsheet, enter sample employee data, and download the file as Sample Spreadsheet.xlsx.

12.2 Custom Table Development

Navigate to Tables → Create New. Create Employee Test with name u_employee_test. Add Employee ID, Employee Name, Email, Department, and Location as String fields.

12.3 Import Set Development

Navigate to Load Data. Create the Employee Import import table, verify the generated name u_employee_import, submit, and proceed to Create Transform Map.

12.4 Transform Map Development

Create Sample Spreadsheet Import. Employee Import is the source table and Employee Test is the target. Use Auto Map Matching Fields and Mapping Assist, then save the mapping.

12.5 Transformation

Select Transform and execute the Transform button. Verify the success/completed result and open Employee Test to confirm that records were created.

13. PHASE 6 – PROJECT TESTING

13.1 Coalesce Configuration

Coalesce is enabled on the relevant field map so repeated employee data can be matched with existing records rather than creating redundant records. The documented project uses Employee ID for this matching behaviour.

13.2 Modified Spreadsheet Test

A four-row spreadsheet is uploaded. Two rows contain existing Employee IDs with changed Name or Email values, while two rows contain new Employee IDs.

13.3 Observed Result

The original project records two inserted rows for the two new IDs and two updated rows for the existing IDs whose employee details were changed.

13.4 Repeated Upload Test

The same four-row sheet is uploaded again through the same Transform Map. The documented result is zero inserted, zero updated, and four ignored rows.

13.5 Validation

Transform History is used to inspect the status of each row. Employee Test is opened to verify that the inserted and updated records are reflected in the target table.

13.6 Testing Summary

Test	Rows	Result
Modified spreadsheet	4	2 inserted, 2 updated
Same spreadsheet repeated	4	0 inserted, 0 updated, 4 ignored

14. PHASE 7 – PROJECT DOCUMENTATION & REPORTING

14.1 Report 1 – Employees by Department

Report name: Employees by Department. Table: Employee Test. Type: Pie Chart. Group By: Department. Aggregation: Count.

14.2 Report 2 – Employees by Location

Report name: Employees by Location. Table: Employee Test. Type: Bar Chart. Group By: Location. Aggregation: Count.

14.3 Report 3 – Employee List Report

Report name: Employee List Report. Table: Employee Test. Type: List. Columns: Employee ID, Employee Name, Email, Department, and Location.

14.4 Reporting Purpose

The three reports present the imported employee information in different forms. The department report provides grouped distribution, the location report provides location-based distribution, and the list report provides detailed record-level information.

15. PHASE 8 – PROJECT DEMONSTRATION & DASHBOARD

15.1 Dashboard Creation

The dashboard is created with the name Employee Analytics Dashboards. The original document also records the ACL/Admin Overrides requirement for the PA_DASHBOARDS.FORM route when that route is used.

15.2 Adding Reports

The Employees by Department, Employees by Location, and Employee List Report are each added to the created dashboard through the report Share / Add to Dashboards option.

15.3 Dashboard Result

The three reports are consolidated into one dashboard. The original project also notes that widgets can be added from the plus icon, the dashboard background can be configured, and sharing restrictions can be applied to users, groups, and roles.

15.4 Demonstration Flow

Spreadsheet → Employee Import → Sample Spreadsheet Import → Field Mapping → Transform → Employee Test → Coalesce Test → Transform History → Reports → Employee Analytics Dashboards.

16. PROJECT DEMONSTRATION

16.1 Initial Import Demonstration

- Open the ServiceNow environment.
- Prepare/select the spreadsheet.
- Load it through Employee Import.
- Open Sample Spreadsheet Import.
- Verify source and target mapping.
- Run Transform.
- Open Employee Test and verify the records.

16.2 Coalesce Demonstration

- Open the Transform Map.
- Verify the Coalesce field configuration.
- Upload the modified spreadsheet.
- Run the transform.
- Review inserted and updated rows in Transform History.
- Repeat the same upload and observe ignored rows.

16.3 Reporting Demonstration

- Open Employees by Department.
- Open Employees by Location.
- Open Employee List Report.
- Open Employee Analytics Dashboards and verify all three reports.

17. EVIDENCE / SCREENSHOTS

The following pages reproduce the relevant evidence pages from the original supplied project document. They are included so that the configuration, testing, reporting, and dashboard portions of the completed project can be visually verified.

Evidence from the original document is included for the Phase 6 testing section, Phase 7 reporting section, and Phase 8 dashboard section.

Figure Evidence – Original Project Document Page 10

Employee ID	Employee Name	Email	Department	Location
SB-0003	Meghana Katija	test2@gmail.com	ServiceNow	Hyderabad
SB-0001	Ratan Kumar	test1@gmail.com	ServiceNow	Hyderabad

Phase 6: Enable Coalesce to Avoid Duplicate Records

- In real projects, the same employee data may be imported multiple times.
- To prevent duplicate employee records, we use **Coalesce**.
- The Coalesce will update the same records with new values if we add and the duplicate values are not inserted.

Steps:

1. Open Transform map Under System LDAP On All menus.
2. Open the Created Transform map , Name is Sample Spreadsheet Import.
3. Under Related list, select the Field maps Section and Make any one field Coalesce True which appears in False.
4. Now save the form.
5. Then again add some data which is in Excel format.

Figure Evidence – Original Project Document Page 11

Table Transform Maps

Name	Source table	Target table	Run business rules	Order	Active	Updated

PHASE 7 : Inserting New Data In Excel Format

Steps :

- Navigate to All menus.
- Search for Load data Under System Import set Open Load Data.
- Fill the details as
- Import set table as select Existing table {Employee Import}.
- Source of Import is Select File and choose the file from Files.
- Sheet number : 1, Header row : 1.
- Now Click submit.

Figure Evidence – Original Project Document Page 13

Load Data

Import set table ☐ Create table ☒ Existing table

Import set table Employee Import [c_employee_import]

Source of the import ☒ File ☐ Data source

File Choose File spreadsheetproject.xlsx

Sheet number 1

Header row 1

Submit

- Newly Created Excel Data is this.

Employee ID	Name	Email	Department	Location
SB-0001	Ratan Kumar	test1@gmail.com	ServiceNow	Hyderabad
SB-0002	Sandeep Guja	test2@gmail.com	ServiceNow	Hyderabad
SB-0003	Meghana Katju	test3@gmail.com	ServiceNow	Hyderabad
SB-0004	Ajay Kumar	test4@gmail.com	ServiceNow	Hyderabad
SB-0005	Bita Sai Prasad	test5@gmail.com	ServiceNow	Hyderabad
SB-0006	Sushma Ganji	test6@gmail.com	ServiceNow	Hyderabad
SB-0007	Yaswanth Nikku	test7@gmail.com	ServiceNow	Hyderabad
SB-0008	Prashanth Reddy	test8@gmail.com	ServiceNow	Hyderabad
SB-0009	Praneeth S	test9@gmail.com	ServiceNow	Hyderabad
SB-0010	Ravi Teja	test10@gmail.com	ServiceNow	Hyderabad
SB-0011	Abhishek S	test11@gmail.com	Salesforce	Hyderabad
SB-0012	Rakesh Bhoomani	test12@gmail.com	Salesforce	Hyderabad
SB-0013	Mounika K	test13@gmail.com	Salesforce	Hyderabad
SB-0014	Sushanth J	test14@gmail.com	Salesforce	Hyderabad
SB-0015	Shru Nandipati	test15@gmail.com	ServiceNow	Hyderabad

- It is the previously added data.
- Now, In this new data we added 4 rows of the 2 rows with the same existing data with different Name changed and Email changed.
- That Raviteja Employee Email was Changed to [\[test10@gmail.com\]](mailto:test10@gmail.com) → [\[test18@gmail.com\]](mailto:test18@gmail.com)].
- And Employee ID with SB-0004 name was changed to [Ajay kumar → Ajay].
- And two other new Employee ID's are added.
- Now after submitting the form it appears as State Completed and Success.

Figure Evidence – Original Project Document Page 14

- Now Click the Run transform Under the next steps.
- Then it opens Specify Import set and transform map which is previously selected transform map then Click Transform button.

Figure Evidence – Original Project Document Page 15

- Now the State is completed and Success.
- Now again click on the Transform history then it shows the newly added data and its status of Inserted and Skipped values out the given data.

Started	State	Completed	Run time	Set	Import set table	Total	Inserts	Updates	Ignored	Skipped	Errors	Transform Map
2026-01-29 03:47:37	Complete	2026-01-29 03:47:38	1 Second	ISET0010003	Employee Import [u_employee_import]	4	2	2	0	0	0	Sample Spreadsheet Import

Figure Evidence – Original Project Document Page 16

- From the above figure : total 4 rows are uploaded out of 2 are Inserted that are two new ID's.
- And 2 rows are updates that are Same ID's with different Name and different Email that we changed.
- Then Open the Employee Tests table and see the rows updated and inserted.

Employee ID	Employee Name	Email	Department	Location
SB-0001	Ratan Kumar	test1@gmail.com	ServiceNow	Hyderabad
SB-0002	Sandeep Gajja	test2@gmail.com	ServiceNow	Hyderabad
SB-0003	Meghana Katoju	test3@gmail.com	ServiceNow	Hyderabad
SB-0004	Ajay	test4@gmail.com	ServiceNow	Hyderabad
SB-0005	Bitta Sai Prasad	test5@gmail.com	ServiceNow	Hyderabad
SB-0006	Sushma Ganji	test6@gmail.com	ServiceNow	Hyderabad
SB-0007	Yaswanth Nikku	test7@gmail.com	ServiceNow	Hyderabad
SB-0008	Prashanth Reddy	test8@gmail.com	ServiceNow	Hyderabad
SB-0009	Praneeth S	test9@gmail.com	ServiceNow	Hyderabad
SB-0010	Raviteja	test10@gmail.com	ServiceNow	Hyderabad
SB-0011	Abhishek S	test11@gmail.com	Salesforce	Hyderabad
SB-0012	Rakesh Bhoomani	test12@gmail.com	Salesforce	Hyderabad
SB-0013	Mounika K	test13@gmail.com	Salesforce	Hyderabad
SB-0014	Sushanth J	test14@gmail.com	Salesforce	Hyderabad
SB-0015	Srinu Nandipati	test15@gmail.com	ServiceNow	Hyderabad
SB-0016	Sri	test16@gmail.com	Airtel	Chennai
SB-0017	Naga sai	test17@gmail.com	Airtel	Hyderabad

- Now Repeat the Phase 7 with the same steps and same Excel sheet and Submit to check how many rows are updated and Inserted with the same data.
- Then Open the Transform history to check.

Started	State	Completed	Run time	Set	Import set table	Total	Inserts	Updates	Ignored	Skipped	Errors	Transform Map
2026-01-29 05:39:36	Complete	2026-01-29 05:39:36	0 Seconds	ISET0010004	Employee Import [u_employee_import]	4	0	0	4	0	0	Sample Spreadsheet Import

- Here we can see the total 4 are uploaded.
- On that 0 rows are Inserted and updates 0 and Ignored 4 rows.
- That same sheet we uploaded to the same transform map we created.

PHASE 8 : Create Reports on Employee Test Table

Navigation Steps :

- Open All menus, Search for **Reports**.
- Under **Usage and governance** Select Reports.
- Click the **New** button to create a new report.
- Create **3 Reports** as follows.

Report 1: Employees by Department

- In Data
- Report name : **Employees by Department**.
- Source Type : **Table**.
- Table : **Employee Test**, Now click the Next button.

Reports						
Updated						
Search						
Actions on selected rows...

Figure Evidence – Original Project Document Page 18

- Now after Clicking next in type Select **Pie chart**.
- And click the **next** button.

- Now In Configure Select Group by **Department** Field.
- In the Aggregation Field Select **Count**.
- Then Click **next**.

Figure Evidence – Original Project Document Page 19

- Now In Style Leave the Chart color by **default**.
- And Click the **Run** button to Execute the given data Report.
- And Click **save** button to Save the Report.

Report 2: Employees by Location

Configuration

- Table: Employee Test
- Type: **Bar Chart**
- Aggregation: **Count**
- Group By: **Location**

Steps :

- 1. Create a New Report.
- 2. Report name : **Employees by Location.**
- 3. Table Select : **Employee Test.**
- 4. Select Type : **Bar Chart.**
- 5. In Configure Select Group by Field : **Location.**
- 6. And Aggregation is **Count.**
- 7. Now Click **Run** to Execute the Report and Click the **Save** to save the Report.

Figure Evidence – Original Project Document Page 21

Original screenshot/evidence page reproduced from the supplied project document (source page 21).

Figure Evidence – Original Project Document Page 22

Report 3: Employee List Report.

Configuration

- Create a New Report name : **Employee List Report.**
- Table: **Employee Test.**
- Select Type: **List.**
- In Configure Select Columns:
 - **Employee ID.**
 - **Employee Name.**
 - **Email.**
 - **Department.**
 - **Location.**
- Now Select **next** and no required to choose anything in **Style.**
- Now Click **Run** to Execute the Report and Click **Save** to Save the Report.

Figure Evidence – Original Project Document Page 23

Figure Evidence – Original Project Document Page 24

PHASE 9 : Add Reports to Dashboard

Create Dashboard

Navigation :

- Open All menus → Search for Dashboards.
- Under Self Service → Click Dashboards.
- On the top right corner Click Create Dashboards or /
- You can create Directly by using the backend name [PA_DASHBOARDS.FORM].
- Then Click New to Create new Dashboards.

Figure Evidence – Original Project Document Page 25

- Only the backend name will open the form if the ACL has the **pa_dashboards** access to **Admin Overrides** True only.
- Then only we have access to the form.

- After Opening the ACL Search the **pa_dashboards** on Name Column.

Name	Decision Type	Operation	Type	Active	Updated by	Updated

- Now Open the **Create Operation** row.

Figure Evidence – Original Project Document Page 26

- Then Click Enable the True for Admin Overrides and Update the Form.
- Then the creation of dashboards will be possible by using the backend name.
- Now Open the **PA_DASHBOARDS.FORM** create dashboard.
- Dashboard name : **Employee Analytics Dashboards.**
- **Save the Form.**

Add Reports to Dashboards.

Navigation Steps:

- Open the **Previously Created Reports.**
- On All menus → type Reports Under **Usage and Governance** select **reports.**
- Open the **Employees by Department.**
- Select the **Edit Report** and Click the **Share** button then the right top corner Select the **Add to Dashboards** Option.
- Then Choose the Created **dashboard name** and Click **Add** button.

Figure Evidence – Original Project Document Page 27

- Same Like that do the remaining **2 reports** in the same navigation how we added **Employees by Department**.
- The **Employees by Location** and **Employee List Report** these two reports are also added to the created dashboard.

Title	Table	Type	Field Name	Created by	Updated
Employee List Report	Employee Test (u_employee_test)	List		admin	2026-01-29 20:57:32
Employees by Location	Employee Test (u_employee_test)	Bar	u_location	admin	2026-01-29 20:42:51
Employees by Department	Employee Test (u_employee_test)	Pie	u_department	admin	2026-01-29 20:39:25

SLA Breaches by Assignment Group	Incident (incident)	Bar	assignment_group	admin	2026-01-01 22:23:49
SLA Breaches by Reason	Incident (incident)	Pie	u_sla_breach_reason	admin	2026-01-01 22:15:34

- After Opening the Report Click the **View Report** Button on the right side of the Context menu.

Figure Evidence – Original Project Document Page 28

- After Clicking the View Report button, Now Click the **Share** button and then share options are visible on the right side.
- Now click the **Add to Dashboards**.

- Now Add the Dashboard that you created called **Employee Analytics Dashboards**.
- Then Click **Add** button.
- Now the **Report** is added to the **dashboards**.
- Now, Same in the process, add the remaining **two reports** to the **dashboard**.

Figure Evidence – Original Project Document Page 29

- From the + icon also we add widgets that our reports from there.
- If we want we can also configure the background color.

- Here the three Reports are added successfully by varying **Department , Location and List Report.**
- We can also restrict the **Users,Groups and Roles** From Share Option.

Conclusion:

1. This project successfully implemented an automated employee data management solution using ServiceNow Import Sets and Transform Maps, ensuring accuracy, efficiency, and data integrity throughout the employee onboarding and update process.
2. A key enhancement in this project was the use of Coalesce in the Transform Map. By enabling Coalesce on the Employee ID field, the system intelligently identifies existing employee records during every import. This prevents the creation of duplicate records and ensures that repeated imports update existing data instead of inserting redundant entries. As a result, the employee database remains clean, reliable, and consistent, which is critical in real-world enterprise environments where data may be imported multiple times from external systems.
3. In addition to data integrity, the project was extended with Reports and Dashboards to provide meaningful insights and real-time visibility into employee data and import activities. Custom reports were created to track:

18. PROJECT OUTCOME

The project successfully demonstrates an automated employee data management workflow using ServiceNow Import Sets and Transform Maps. Spreadsheet records are loaded into a staging table, transformed through a configured source-to-target mapping, and verified in the Employee Test table.

The Coalesce enhancement provides a documented method for recognizing existing employee IDs during repeated imports. The recorded test results show that new IDs can be inserted while existing IDs can be updated when their Name or Email values change. A subsequent identical upload results in ignored rows according to the original project evidence.

The reporting extension provides department-wise, location-wise, and detailed employee views. These reports are then consolidated in the Employee Analytics Dashboards dashboard, providing a centralized presentation of the imported data.

19. LEARNING OUTCOMES

- Understanding of ServiceNow Import Sets and staging tables.
- Understanding of source-to-target field mapping.
- Practical experience with Transform Maps and transformation execution.
- Understanding of Coalesce and repeated-import behavior.
- Use of Transform History for validation.
- Creation of reports using table data and aggregation.
- Creation and configuration of a dashboard containing multiple reports.

20. CONCLUSION

The Import Data using Transform Maps (Spreadsheet) project provides an end-to-end demonstration of importing spreadsheet data into ServiceNow, transforming it into a custom target table, validating the results, handling repeated imports with Coalesce, and presenting the resulting employee information through reports and a dashboard.

The eight phases—Brainstorming & Ideation, Requirement Analysis, Project Design, Project Planning, Project Development, Project Testing, Project Documentation & Reporting, and Project Demonstration & Dashboard—together describe the complete project lifecycle from initial idea through implementation, validation, reporting, and final demonstration.
