

PHASE 1

Brainstorming & Ideation

Import Data using Transform Maps (Spreadsheet) — ServiceNow Micro Project

This document is a separate phase report prepared from the supplied original project document. The wording is expanded for clarity while retaining the original project terminology, configurations, steps, and documented results.

Phase Summary

Defines the project idea, problem, objectives, and expected value of importing employee spreadsheet data into ServiceNow.

1.1 Project Overview

The project demonstrates an end-to-end ServiceNow workflow for importing structured employee information from an external spreadsheet. The source document describes a real-world style situation in which bulk employee data is received in Excel format and must be migrated into ServiceNow efficiently and accurately. The data first enters an Import Set table, which acts as a staging area, and is then transformed into the Employee Test target table through a Transform Map.

1.2 Problem Identification

Manual entry of a large number of employee records can require repeated data entry and can introduce inconsistencies. The project addresses this by providing a structured import process. Spreadsheet data is collected in a consistent format, loaded into ServiceNow, mapped to corresponding target fields, transformed, and then checked in the target table.

1.3 Proposed Idea

The selected idea is to use ServiceNow Import Sets and Transform Maps to automate the movement of employee spreadsheet data into a custom Employee Test table. The process is extended with Coalesce testing so that repeated employee information can be handled without unnecessary duplicate records. Reports and a dashboard are then used to present the resulting employee information.

1.4 Main Objectives

The main objectives are to understand the complete spreadsheet-to-ServiceNow import flow, create the required source and target structures, perform field mapping, execute and validate the transformation, test duplicate/update behavior using Coalesce, and provide visual reporting through employee reports and an analytics dashboard.

1.5 Expected Outcome

At the end of this phase, the project idea is clearly defined: spreadsheet employee data will be imported into an Import Set, transformed into Employee Test records, validated, tested for repeated imports, and presented through reports and a dashboard. This gives the remaining phases a clear implementation direction.

Configuration / Planning Reference

Project element	Planned approach
Platform	ServiceNow
Input	Spreadsheet / Excel employee data
Staging area	Employee Import (u_employee_import)
Target	Employee Test (u_employee_test)
Transformation	Sample Spreadsheet Import
Duplicate handling	Coalesce
Output	Validated records, reports and dashboard

Source Document Alignment

The original project document covers this phase across source pages 1. The expanded text above reorganizes the same documented material into a standalone phase report so that the phase can be submitted or reviewed independently.
