

PHASE 2

Requirement Analysis

Import Data using Transform Maps (Spreadsheet) — ServiceNow Micro Project

This document is a separate phase report prepared from the supplied original project document. The wording is expanded for clarity while retaining the original project terminology, configurations, steps, and documented results.

Phase Summary

Identifies the tables, fields, import process, validation needs, Coalesce requirement, reports, and dashboard requirements.

2.1 Functional Requirements

The system must accept a prepared employee spreadsheet and provide a controlled path for loading it into ServiceNow. A custom Employee Test table must be available as the destination. The target table requires Employee ID, Employee Name, Email, Department, and Location fields, all documented as String fields in the original project.

2.2 Import Requirements

An Employee Import Import Set table is required to receive the spreadsheet data before transformation. The project also requires the Sample Spreadsheet Import Transform Map, with Employee Import as the source and Employee Test as the target. Field mappings are created using Auto Map Matching Fields and Mapping Assist.

2.3 Validation Requirements

The transformation must be checked for successful completion. The Employee Test table must be opened after the transform so that imported records can be inspected. For repeated imports, Transform History must be reviewed to distinguish inserted, updated, and ignored rows.

2.4 Reporting Requirements

The project requires three reports: Employees by Department, Employees by Location, and Employee List Report. These reports use Employee Test as their data source and are later added to the Employee Analytics Dashboards dashboard.

2.5 Quality and Duplicate-Handling Requirement

Coalesce must be enabled on a field map so that an existing employee can be matched rather than creating another record. The source document later demonstrates this behavior by changing employee details for existing IDs, adding new IDs, and repeating the same import.

Configuration / Planning Reference

Requirement	Configuration from the source
Target table	Employee Test / u_employee_test
Employee ID	String
Employee Name	String
Email	String
Department	String
Location	String
Import Set	Employee Import / u_employee_import
Transform Map	Sample Spreadsheet Import
Mapping	Auto Map Matching Fields + Mapping Assist

Source Document Alignment

The original project document covers this phase across source pages 2, 3, 4. The expanded text above reorganizes the same documented material into a standalone phase report so that the phase can be submitted or reviewed independently.
