

PHASE 3

Project Design

Import Data using Transform Maps (Spreadsheet) — ServiceNow Micro Project

This document is a separate phase report prepared from the supplied original project document. The wording is expanded for clarity while retaining the original project terminology, configurations, steps, and documented results.

Phase Summary

Designs the source-to-staging-to-target workflow and documents the Employee Test, Employee Import, and Transform Map structures.

3.1 Overall Data Flow

The designed workflow is: Spreadsheet → Employee Import staging table → Sample Spreadsheet Import Transform Map → Employee Test → validation → reports → Employee Analytics Dashboards. Each stage has a specific responsibility, making it possible to inspect the data before and after transformation.

3.2 Target Table Design

The Employee Test table is the final destination for the imported employee records. Its documented name is `u_employee_test`. The target fields are Employee ID, Employee Name, Email, Department, and Location. These fields provide the basic employee information needed for later filtering, grouping, reporting, and update testing.

3.3 Import Set Design

Employee Import is created through Load Data and is identified as `u_employee_import`. It functions as the staging structure where source spreadsheet information is received before the Transform Map moves the information into the target table.

3.4 Transform Map Design

The Transform Map is named Sample Spreadsheet Import. Employee Import is automatically populated as the source table, while Employee Test is selected as the target. Auto Map Matching Fields and Mapping Assist are used to establish the source-to-target relationships.

3.5 Design Considerations

The design separates loading from transformation. This makes the process easier to validate and troubleshoot because the imported source data can be examined before it is written into the final table. The later Coalesce enhancement adds a controlled matching mechanism for repeated employee imports.

Configuration / Planning Reference

Layer	Component	Purpose
Source	Sample Spreadsheet.xlsx	Provides structured employee records
Staging	Employee Import	Receives imported source data
Transformation	Sample Spreadsheet Import	Maps and transforms fields
Target	Employee Test	Stores final employee records
Validation	Transform History + table	Checks transformation results
Presentation	Reports + Dashboard	Displays employee information

Source Document Alignment

The original project document covers this phase across source pages 4, 5. The expanded text above reorganizes the same documented material into a standalone phase report so that the phase can be submitted or reviewed independently.
