

PHASE 8

Project Demonstration & Dashboard

Import Data using Transform Maps (Spreadsheet) — ServiceNow Micro Project

This document is a separate phase report prepared from the supplied original project document. The wording is expanded for clarity while retaining the original project terminology, configurations, steps, and documented results.

Phase Summary

Creates the Employee Analytics Dashboards dashboard, adds the three reports, and presents the complete project demonstration flow.

8.1 Dashboard Creation

The final phase demonstrates how the saved reports are consolidated into a dashboard. The source document navigates through All menus to Dashboards and describes creation of the Employee Analytics Dashboards dashboard. It also documents the ACL-related Admin Overrides requirement for the backend PA_DASHBOARDS.FORM route.

8.2 Dashboard Access Configuration

The original document states that direct access through the backend form requires the appropriate pa_dashboards ACL access with Admin Overrides enabled. The Create operation row is opened and Admin Overrides is set to True before updating the form. This allows dashboard creation through the documented route.

8.3 Dashboard Configuration

The dashboard is named Employee Analytics Dashboards. After saving it, the existing reports are opened and the Add to Dashboards option is used. Employees by Department, Employees by Location, and Employee List Report are added to the created dashboard.

8.4 Adding Reports

Each report can be added from the report interface through the Share option and Add to Dashboards. The created dashboard is selected and the Add action is used. The same procedure is repeated for the remaining reports.

8.5 Dashboard Result

The original project shows the three reports successfully consolidated in the dashboard. The dashboard therefore provides a centralized view of employee information using the department chart, location chart, and list report. The document also notes that widgets can be added from the plus icon and that background configuration is available.

8.6 Demonstration Flow

A complete demonstration can begin with the spreadsheet and Employee Test table, continue through Employee Import and Sample Spreadsheet Import, show the field mappings and transform success, verify records, demonstrate Coalesce behavior through Transform History, and finish by opening the Employee Analytics Dashboards dashboard.

8.7 Final Project Outcome

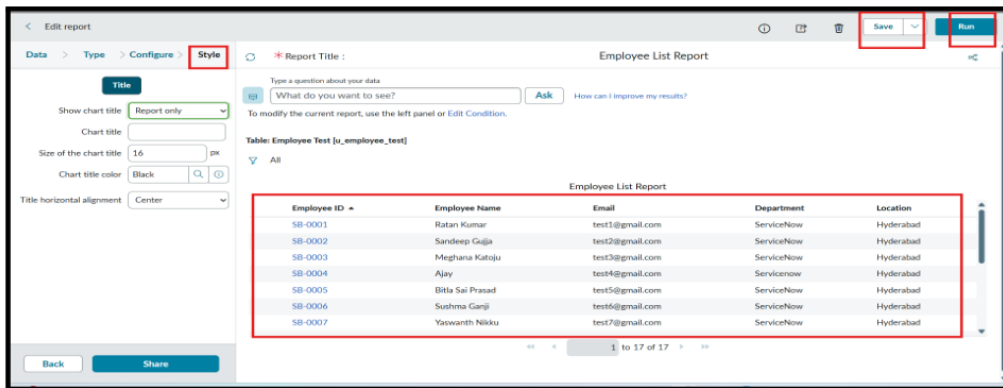

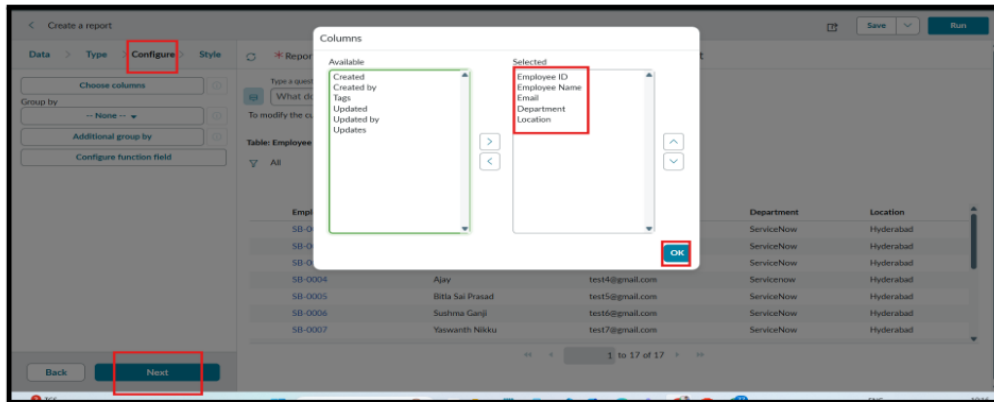

The source document concludes that the project implements an automated employee data management solution using ServiceNow Import Sets and Transform Maps. Coalesce supports duplicate prevention and updates, while reports and dashboards provide centralized visibility into employee data and import activities.

Configuration / Planning Reference

Dashboard component	Included configuration
Dashboard name	Employee Analytics Dashboards
Report 1	Employees by Department
Report 2	Employees by Location
Report 3	Employee List Report
Additional options	Widgets, background configuration, sharing restrictions

Original Screenshot Evidence

The following pages reproduce the relevant screenshot/evidence pages from the original supplied project document. They are included without replacing the original visual evidence, so the configuration and results can be checked directly.

PHASE 9 : Add Reports to Dashboard

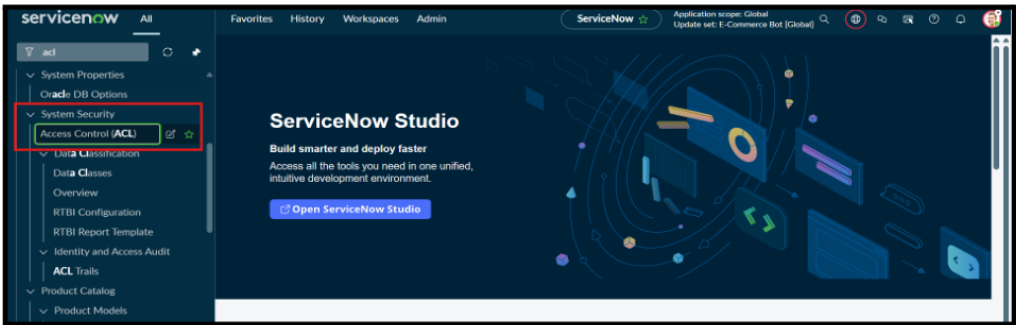

Create Dashboard

Navigation :

- Open All menus → Search for Dashboards.
- Under Self Service → Click Dashboards.
- On the top right corner Click Create Dashboards or /
- You can create Directly by using the backend name [PA_DASHBOARDS.FORM].
- Then Click New to Create new Dashboards.

Evidence reproduced from the original project document — source page 24.

- Only the backend name will open the form if the ACL has the **pa_dashboards** access to **Admin Overrides** True only.
- Then only we have access to the form.

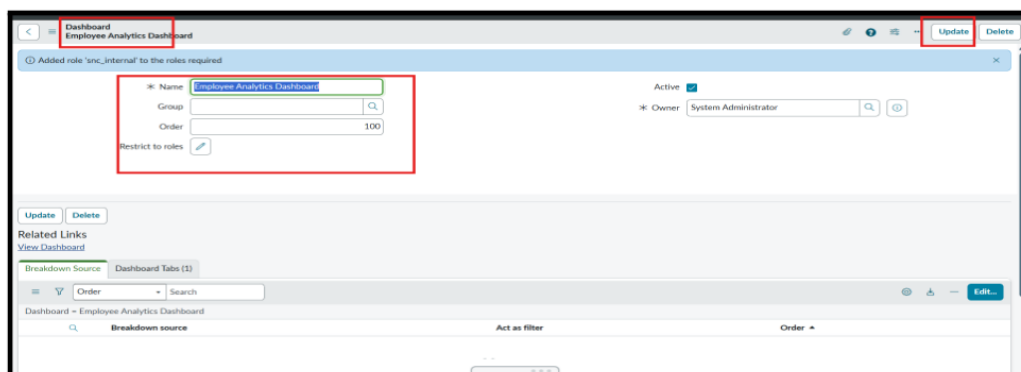

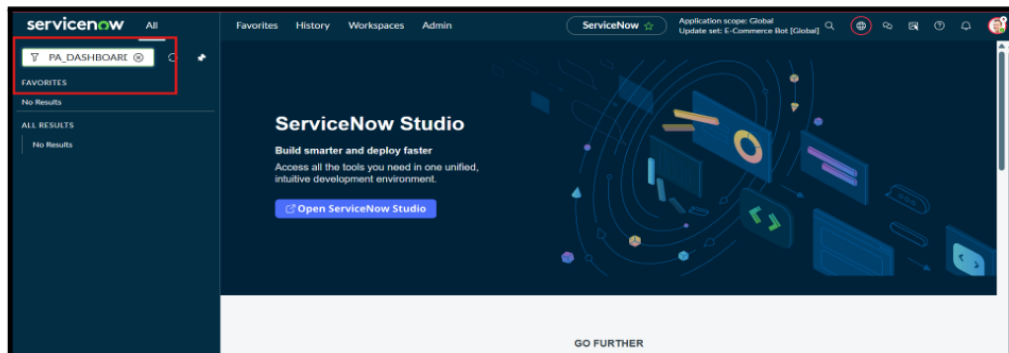

- After Opening the ACL Search the **pa_dashboards** on Name Column.

Name	Decision Type	Operation	Type	Active	Updated by	Updated
pa_dashboards	Allow If	write	record	true	admin	2019-03-25 09:32:03
pa_dashboards	Allow If	write	record	true	admin	2016-04-19 03:29:14
pa_dashboards	Allow If	read	record	true	admin	2019-03-25 09:34:18
pa_dashboards	Allow If	report_view	record	true	admin	2022-11-16 22:19:19
pa_dashboards	Allow If	delete	record	true	admin	2016-04-19 03:26:55
pa_dashboards	Allow If	read	record	true	admin	2018-03-01 07:27:17
pa_dashboards	Allow If	create	record	true	admin	2026-01-29 22:47:37
pa_dashboards	Allow If	delete	record	true	admin	2019-03-25 09:35:29

pa_dashboards.restrict_to_roles	Allow If	write	record	true	admin	2016-09-08 02:00:29
pa_dashboards.restrict_to_roles	Allow If	query_range	record	true	@@unc_write_audit@@	2025-09-08 22:49:16
pa_dashboards.restrict_to_roles	Allow If	write	record	true	admin	2018-03-01 08:50:55

- Now Open the **Create Operation** row.

Evidence reproduced from the original project document — source page 25.

- Then Click Enable the True for Admin Overrides and Update the Form.
- Then the creation of dashboards will be possible by using the backend name.
- Now Open the **PA_DASHBOARDS.FORM** create dashboard.
- Dashboard name : **Employee Analytics Dashboards.**
- **Save** the Form.

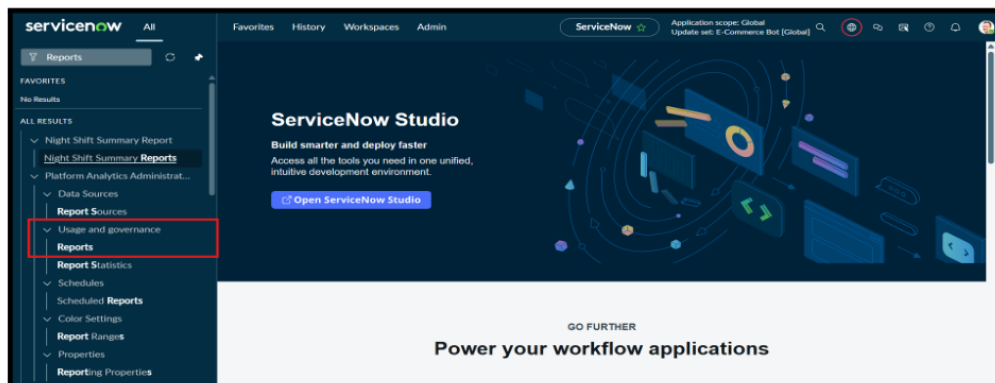

Add Reports to Dashboards.

Navigation Steps:

- Open the **Previously Created Reports.**
- On All menus → type Reports Under **Usage and Governance** select **reports.**
- Open the **Employees by Department.**
- Select the **Edit Report** and Click the **Share** button then the right top corner Select the **Add to Dashboards** Option.
- Then Choose the Created **dashboard name** and Click **Add** button.

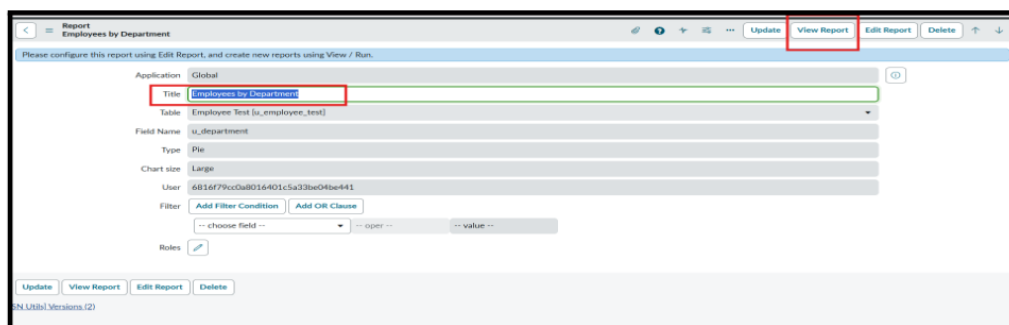

Evidence reproduced from the original project document — source page 26.

- Same Like that do the remaining **2 reports** in the same navigation how we added **Employees by Department**.
- The **Employees by Location** and **Employee List Report** these two reports are also added to the created dashboard.

Title	Table	Type	Field Name	Created by	Updated
Employee List Report	Employee Test [u_employee_test]	List		admin	2026-01-29 20:57:32
Employees by Location	Employee Test [u_employee_test]	Bar	u_location	admin	2026-01-29 20:42:51
Employees by Department	Employee Test [u_employee_test]	Pie	u_department	admin	2026-01-29 20:39:25
SLA Performance Trend	Incident [incident]	Bar	opened_at	admin	2026-01-02 02:32:06
Pending Justifications	Incident [incident]	List		admin	2026-01-02 01:13:00

- After Opening the Report Click the **View Report** Button on the right side of the Context menu.

Evidence reproduced from the original project document — source page 27.

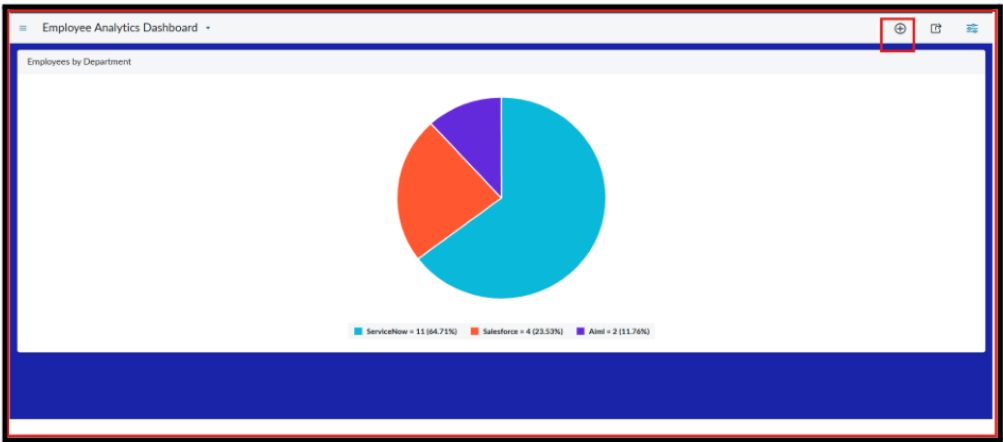

Original source page 28

- After Clicking the View Report button, Now Click the **Share** button and then share options are visible on the right side.
- Now click the **Add to Dashboards**.

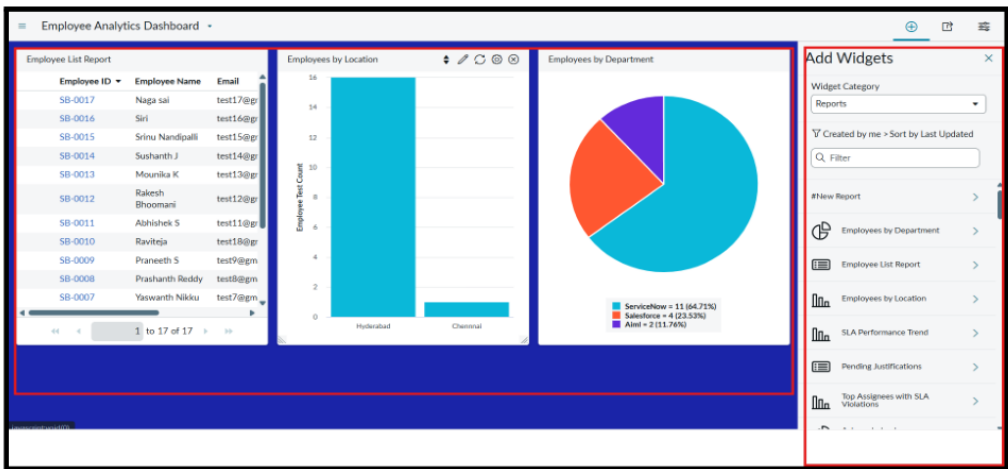

- Now Add the Dashboard that you created called **Employee Analytics Dashboards**.
- Then Click **Add** button.
- Now the **Report** is added to the **dashboards**.
- Now, Same in the process, add the remaining **two reports** to the **dashboard**.

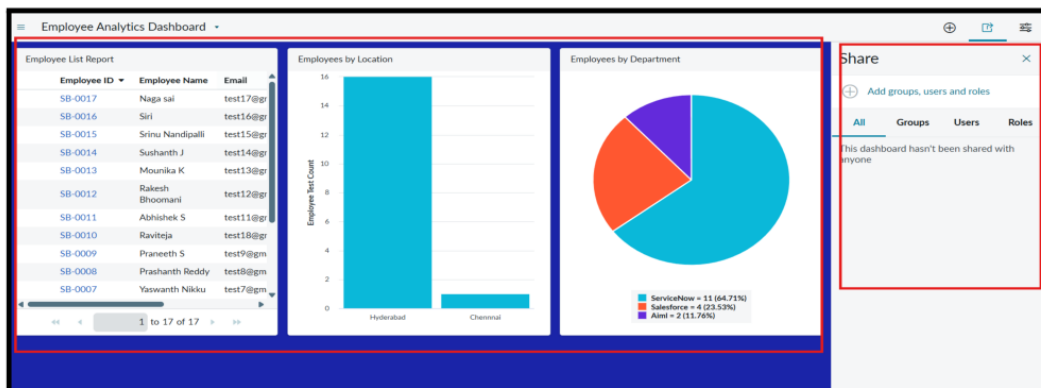

Evidence reproduced from the original project document — source page 28.

- From the + icon also we add widgets that our reports from there.
- If we want we can also configure the background color.

Evidence reproduced from the original project document — source page 29.

- Here the three Reports are added successfully by varying **Department , Location and List Report**.
- We can also restrict the **Users,Groups and Roles** From Share Option.

Conclusion:

1. This project successfully implemented an automated employee data management solution using ServiceNow Import Sets and Transform Maps, ensuring accuracy, efficiency, and data integrity throughout the employee onboarding and update process.
2. A key enhancement in this project was the use of Coalesce in the Transform Map. By enabling Coalesce on the Employee ID field, the system intelligently identifies existing employee records during every import. This prevents the creation of duplicate records and ensures that repeated imports update existing data instead of inserting redundant entries. As a result, the employee database remains clean, reliable, and consistent, which is critical in real-world enterprise environments where data may be imported multiple times from external systems.
3. In addition to data integrity, the project was extended with Reports and Dashboards to provide meaningful insights and real-time visibility into employee data and import activities. Custom reports were created to track:
